

# JOHO WEEKLY

---

Joho, Your weekly escape into randomness.

✍ This week's lineup kicks off with a versatile trip planner website to make your travels seamless, followed by an innovative study platform that ensures no doubts remain in your learning. In the news section, discover a revolutionary invention poised to change pollution forever, along with insights into modern housing trends. The movies feature a gripping sci-fi adventure and a thrilling thriller to keep you on the edge of your seat. For music lovers, the song of the week is a funky blend of pop and R&B from the King of Pop himself. Gamers get a double treat with a wild survival game and a fast-paced shooting game as the games of the week. Finally, dive into an intriguing essay on the mysterious 4th dimension, penned by none other than Avaneesh Nanivadekar. All this wrapped up with a touch of madness and excitement, ready to keep you hooked!

# *Useful Websites of the Week*

## PlanTrip Ai - The Travel God

- PlanTrip AI is a smart travel companion that designs the perfect trip in seconds. Just enter your destination, travel dates, budget, and preferences and it instantly creates a full itinerary with flights, hotels, activities, and even local food recommendations.

## Explain Like Im Five- Never have unsolved doubts for life!

It's a site where you type any topic of math, history, science, a random \*Science fun facts\* Youtube video and it explains it to you in the simplest way possible first, like you're 5 years old. Then, it levels up the difficulty step by step, so you go from "kid-level" to "expert-level" without feeling lost.

# Science Zone

**Brain food for people who like space, science, and mildly terrifying robots**

## Scientists Find Plant-Based Way to Remove Microplastics from Water!

Researchers have discovered that extracts from okra (lady's finger) and fenugreek seeds can quickly clean microplastic-polluted water. The natural gum in these plants acts like a sticky net, clumping tiny plastic particles together so they can be filtered out. In lab tests, just 1 gram of the plant extract was enough to remove nearly all microplastics from a sample within 30 minutes. This eco-friendly method works without harmful chemicals, is inexpensive, and could help improve drinking water safety in areas affected by plastic pollution.

Finally, stuff happening in the world  
that won't make you wanna lose  
faith in humanity

## ■ The Greatness of modern houses-Circadian Lighting And Enhanced Air Filters

In 2025, indoor wellness gets a major upgrade by combining circadian lighting systems with advanced air filtration technology, creating healthier and more productive environments. Circadian lighting adjusts light color and intensity throughout the day to match natural sunlight patterns—bright, cool tones in the morning to boost alertness and warmer, softer hues in the evening to support relaxation and quality sleep. This helps regulate your body's internal clock, improving mood, focus, and rest.

On the air side, enhanced filtration goes beyond basic purification with multi-stage systems using HEPA filters, activated carbon, and UV sterilization to remove pollutants, allergens, and harmful microbes. These smart air systems monitor and adjust air quality in real time, ensuring clean, fresh air circulates efficiently without noise or drafts.

Together, these technologies create a balanced indoor atmosphere that supports both physical and mental well-being—helping you breathe easier and live brighter, whether at home or work. This fusion marks a key wellness trend for 2025, making spaces more aligned with natural human rhythms and healthier living.

# Movies of the week

## ARRIVAL

2016  
U/A(13+)  
7.9/10  
Sci-Fi  
English  
Prime Video

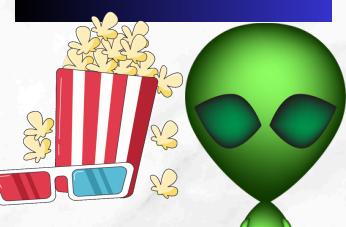

A gripping sci-fi drama about Louise Banks, a gifted linguist recruited by the military to decipher the language of mysterious alien visitors. As she races against time to communicate with the extraterrestrials, she uncovers profound truths about humanity, time, and connection. The film blends intense mystery with emotional depth, making it a serious and thought-provoking experience for viewers.

## A Wednesday

2008  
U/A(13+)  
8.1/10  
Thriller  
Hindi  
Netflix

An Indian thriller about an anonymous man who calls the Mumbai police with a chilling warning: he has planted bombs all over the city and demands the release of certain terrorists. As the clock ticks, a tense battle of wits unfolds between the man and the police, revealing deep questions about justice and morality. With tight storytelling and intense suspense, this film keeps you hooked from start to finish.

# Song of the week

**Xscape– Michael Jackson**

**Genre: Pop / Funk / R&B**

**Release Year: 2014**

## **Why it's a hidden gem:**

This track reveals a **deep emotional struggle** with **fame and control**, wrapped in **smooth, funky beats** and the King of pop does not disappoint. Michael Jackson's vocals carry a **intense tone** that feels **personal and authentic**, making the song a soulful reflection on the desire to break free from industry pressures. The refreshed **production by Rodney Jerkins** gives it a **modern edge while preserving Jackson's classic style.**

## **Lyric Vibe:**

Raw, introspective, and powerful, expressing a desire for freedom and escape.

## **Joho Breakdown:**

-  **Production:** **Classic MJ meets modern polish.** Funky bass lines and sleek synths create a fresh yet timeless sound.
-  **Theme:** **The tension between fame and freedom,** the pressure to comply versus the need to “xscape.”
- **Relatable if:** You've ever **felt trapped by expectations** or **wanted to break free from the constraints** in your life.

# Games of the week

## 💰 Paid Game of the Week

- **Game:** Uncharted: The Lost Legacy
- **Price:** ₹1,499 (approx)
- **Genre:** Action-adventure, exploration
- **Platform:** PS, PC, Xbox (via Game Pass)
- **Core Features:**
  - Follow Chloe Frazer and Nadine Ross on a thrilling treasure hunt in South India
  - Explore detailed, exotic environments inspired by Indian culture and mythology
  - Engaging story with cinematic gameplay and dynamic combat
  - Puzzle-solving and platforming elements
  - Stunning visuals and immersive sound design
  - Rich character interactions and deep narrative
- **Release date:** August 22, 2017
- **Why We Chose Uncharted: The Lost Legacy**

We picked Uncharted: The Lost Legacy for its gripping story and unique setting focused on Indian artifacts like the Ganesha Tusk. It stands out with strong female leads, gorgeous environments, and a mix of action, exploration, and puzzle-solving. Though not as massive as the main Uncharted games, it delivers a satisfying standalone adventure with solid gameplay and great replay value.

Free game of the week:

# SPLITGATE 2

🎯 **Genre:** Arena FPS / Portal Shooter

💰 **Price:** Free-to-Play

💻 **Platform:** PC, Xbox, PS4, PS5

🥇 **Why it's criminally underrated:**

- Combines classic arena shooter action with innovative portal mechanics – like Portal meets Halo.
- Fast-paced gameplay with fluid movement and strategic portal placement.
- Maps designed for verticality and clever portal use, keeping every match unpredictable.
- Great for both casual fun and high-skill competitive play.
- Despite the hype, it's still under the radar compared to other shooters – a hidden gem for FPS fans.

| 🎵 **Sound Design** | Crisp gunfire and portal effects make every shot and teleport feel impactful. |

| 🔥 **Gunplay** | Tight, responsive weapons with no aim assist – skill truly shines here. |

| 🧠 **Strategy** | Master portals to outsmart and flank enemies; pure mind games. |

| 🤝 **Squad Play** | Team up or solo; communication and portal coordination win rounds. |

⭐ **Joho Says:**

Splitgate 2 takes classic shooter thrills and turns them up with portals that rewrite the rules of combat. If you want fast, clever, and skill-based FPS action without spending a dime, this one's a must-try.

# The Secrets of the 4<sup>th</sup> Dimension

Let's dive into the world of mathematics as we speak about dimensions. As we all know, there are only 3 possible dimensions in this universe, right? Length, width, and height. Well, guess what? We might be wrong because the universe has a lot of secrets, and they are just mind-blowing. So, let's discuss some real facts and theories that make Marvel look like a small child.

Till 1915, people believed that there are only 3 dimensions in the universe until a German-American scientist, Albert Einstein, presented his famous Theory of Relativity and changed the world of mathematics, physics, and astronomy. He described the fourth dimension as either time or gravity, but I believe the theory of time is actually not a very bad theory. Everything in this entire world has a shape, colour, sound, or is made with particles except time. Even light has particles, sound has particles and waves, aromas have particles, water and air have sounds, but time just does not have any of that; it just exists. Now imagine a colourless, odourless, soundless, shapeless object, made up of nothing. It is impossible to imagine or find an object that has those properties all at once, and that is why it is impossible. Even feelings are made of particles! In this entire world, only time is basically nothing. Time is invisible to us.

It feels like time does not exist, and as we know, there is something else that is invisible and so-called non-existent—the 4th dimension. Although I don't think that the 4th dimension is gravity because Einstein said that gravity is an invisible space curvature between spatial objects which is the reason why intergalactic objects orbit each other in space. But then that means it controls black holes and white holes, which are objects with infinite density and mass, and there are infinite amounts of these infinite masses. A force that can tolerate infinity cannot exist as it would create a paradox leading to the destruction of the universe. Now that is what we have discussed on what the 4th dimension is. Now let's discuss theories on what can be accomplished by reaching the 4th dimension—

**Reaching God-** God is known as the all-knowing being in the universe who makes and controls everything. That means he forms the fabric of reality, and there is something else that does the same thing—time, aka the 4th dimension. This tells us the 4th dimension might be our way to find God and understand time!

**The Multiverse-** Okay, you might say Marvel has rotted my brain, but as we all know, the multiverse is nothing but another fabric of reality, and as I explained, the fourth dimension, aka time, is said to have control over this fabric!

**Time Travel-** Time travel will not be possible without understanding and controlling time. If we access the 4th dimension, it might reveal these secrets of time travel, although it is highly unlikely as time travelling can create paradoxes.

In conclusion, the universe does hide a lot of things, and it's our job to find them out and use them only for the betterment of society. But I do not think humans will use it for good, so we should be grateful that no one has found these yet.

**-Avaneesh Nanivadekar**

 **THANK YOU FOR BEING AWESOME!** 

**Seriously, thank you for spending your time with us whether you scrolled past the memes, replayed the song recs, or rage-clicked through the game picks**

**It means a LOT to us.**

**We're just a bunch of teens trying to make something cool, fun, and a little bit different — and the fact that you're here, reading this, vibing with it, maybe even sharing it?**

**That's what keeps us going.**

**Your support = fuel for the chaos.**

**So from the whole Joho Weekly crew:  
THANK YOU. WE SEE YOU. WE APPRECIATE YOU.**

**WE'LL BE BACK WITH MORE.**

**Till then — stay curious, stay loud, stay you.**

**Peace out and power on **

**— Team Joho Weekly**
